PROFESSIONAL SUMMARY

Security-focused engineer with hands-on experience in security assessment, zero-trust network design, and security automation across enterprise environments. Builds security tooling and segmented, least-privilege infrastructure spanning IAM, Linux/Windows systems, and distributed cloud-native platforms; CompTIA Security+ certified, B.S. Information Technology (UCF, August 2026).

EDUCATION

Bachelor of Science - Information Technology, University of Central Florida, GPA: 3.5 August 2026

Relevant Coursework: System Admin & Maintenance, Cloud Computing, Enterprise Computing, Web-Based IT, Networks

Involvement: HackUCF, LEAD Scholars Academy, Dean's List

Study Abroad - Cloud Computing & IoT: Zurich University of Applied Sciences Spring 2025

EXPERIENCE

Systems Administration Intern May 2024 - August 2024
B2 Solutions Cape Coral, FL

- Performed vulnerability and configuration assessments across 20+ client networks using DattoRMM, Kaseya, Meraki, and Windows Server 2022, implementing remediation strategies that reduced client security exposure.
- Automated security workflows with custom PowerShell/.NET components inside DattoRMM, cutting remediation time 50%+ across all client tenants.
- Executed identity and tenant migrations (Microsoft 365 to Google Workspace; Azure AD/Intune, Active Directory) for a 50+ user environment, provisioning a production Windows Server 2022 R2 host and standardizing ITGlue documentation.

PROJECTS

VendorGuard - Third-Party Risk Assessment Platform May 2026 - July 2026

- Built a stateless TPRM scanner (Next.js 15, FastAPI) that scores a vendor's external security posture across five signals, TLS, DNS/email authentication, network exposure, breach-corpus presence, and version-matched CVEs, mapped to NYDFS 500.11 and DORA obligations.
- Engineered backport-aware CVE matching that detects distro-packaged builds and down-ranks likely-patched findings, lowering version-match false positives while preserving 100% recall.

Enterprise Homelab - Segmented Zero-Trust Network August 2024 - Present

- Designed a segmented, enterprise-style network on a MikroTik firewall using VLANs, granular firewall rules, and a network-wide VPN, enforcing least-privilege access and defense-in-depth between zones.
- Deployed Windows Server and Linux hosts; instrumented Splunk and Wireshark for SIEM, threat detection, and incident response.

Distributed Systems - Multi-Node Kubernetes Cluster January 2025 - July 2025

- Deployed and managed distributed, cloud-native applications on a multi-node K3S cluster at ZHAW (Zurich), configuring API gateways and TLS termination per cloud-native operational best practices.

SKILLS

Certifications:	CompTIA Security+
Security & Access:	Zero-Trust, Defense-in-Depth, IAM (AD, Azure AD/Intune), MFA, VLANs, VPN
Network & Monitoring:	MikroTik, Cisco Meraki, Wireshark, Splunk, Huntress, DattoRMM/Kaseya
Languages:	Python, PowerShell, Bash, Java, PHP, SQL, C/C++
Infrastructure:	Windows Server, Linux, Proxmox VE, Hyper-V, Kubernetes, Home Assistant

LEADERSHIP & ACTIVITIES

- **Eagle Scout, Scouts BSA (2020)** - Led 25+ volunteers through a hurricane-recovery project; coordinated logistics, managed resources, and delivered lasting environmental impact. Active in HackUCF (CTF and attack-and-defend competitions).
